RESEARCH EXPERIENCE

- 2016 – Present PRINCETON UNIVERSITY, NEW JERSEY, USA
Researcher Developed a decision support system for managing inventory in a network. The decision support system was built using stochastic modeling and machine learning. Experienced building data-driven solutions for real-world problems and interactive web applications that share these solutions with the general public. Taught the computer programming section of the Monte Carlo simulation course in python for three semesters.
- Spring 2019 INSIGHT DATA SCIENCE, NEW YORK, USA
Data Science Built a recommendation engine that helps users discover new music they would enjoy. Implemented a content-based recommendation model using data from the Million Song Dataset (python). Developed the front-end in Flask and deployed the web-application on AWS.
Fellow
- 2017 – 2018 TENCENT AMERICA LLC, SEATTLE, USA
Research Created an artificial intelligent (AI) agent that can play a challenging video game.
Intern Developed a feedback-based tree search algorithm for training an AI agent to learn how to navigate the challenging game environment. Implemented a neural network version of the feedback-based tree search algorithm in python.
- 2013 – 2015 CITY COLLEGE, NEW YORK, USA
Research Asst. Conducted research on high resolution meteorological forecasts using artificial neural network. Estimated and identified the variables that are needed to improve downscaling of shortwave radiation.

Summer 2014 RUTGERS UNIVERSITY, NEW JERSEY, USA

DHS Intern. Conducted research on cryptography with special focus on cybersecurity. Added verification components to two searchable symmetric encryption algorithms used for cloud computing to allow a client to efficiently verify an outsourced computation.
